

# Phenotypic Variation Analysis

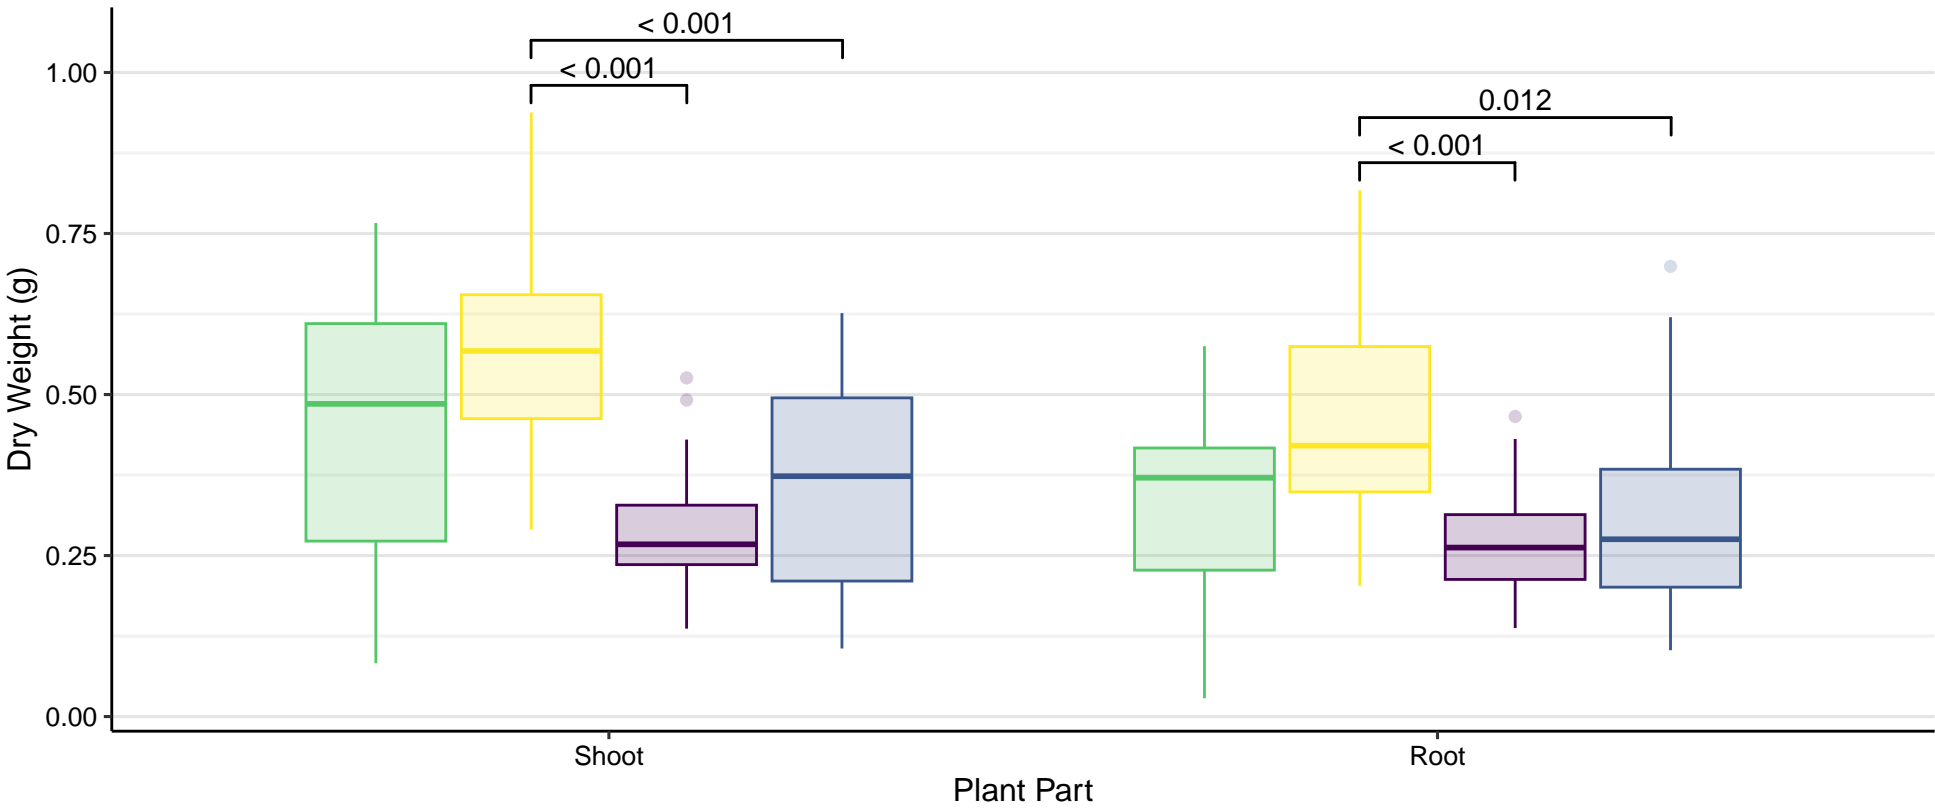

## b Total Biomass Produced

Only significant  $p$ -values are shown (Wilcoxon test with Bonferroni correction)

## c Shoot vs. Root Biomass Produced

Only significant  $p$ -values are shown (Wilcoxon test with Bonferroni correction)

## d Treatment Effects on Plant Biomass Allocation

Plant dry weight is used as a model co-factor; only significant  $p$ -values are shown (pairwise  $t$ -statistic test with Sidak correction)
